Subject: FWM meeting tomorrow

As a reminder, we have a FWM meeting tomorrow from 1-4 at the Port. The goal of the meeting is to finalize the approach to calibrate the model. At the meeting, we'll be discussing the following:

- 1) Walk through the tables and emails sent last week
- 2) Discuss calibration approaches
- 3) Discuss deleting the perch sample from T2E from the calibration dataset.
- 4) Discuss 3 options for clams (full integration into the FWM, BSAF only, application of FWM but without a separate full calibration [although we might tweak a few clam only parameters if needed]).
- 5) Discuss RBTC options at a high level. Although related, the calibration approach will not limit our RBTC options. We need a final approach for RBTC calculation by the end of the month.
- 6) Discuss running the calibrated model at the modeling area scale to gain info about application of the model (not calibration of the model).

Please let Fiona, John, or me know if you have questions. See you tomorrow!
